ABSTRACT

This third grade environmental education guide is one of a series of guides, K-12, that were developed by teachers to help introduce environmental education into the total curriculum. The guides are supplementary in design; it is the teacher's decision when the concepts, objectives, activities, and resources may best be integrated into the existing classroom curriculum. This guide contains a series of episodes (mini-lessons), each having a number of suggested in- and out-of-class learning activities. The episodes are built around 12 major environmental concepts that form a framework for each grade or subject area, as well as for the entire K-12 program. Although the same concepts are used throughout the K-12 program, emphasis is placed on different aspects of each concept at different grade levels. The third grade guide focuses on aspects such as food/clothing/shelter, family and roles, water quality, desert regions, and sound. Each of the 12 concepts is covered in one of the episodes contained in the guide. Further, each episode offers subject area integration, subject area activities, interdisciplinary activities, cognitive and affective behavioral objectives, and suggested references and resource materials useful to teachers and students. An appendix containing related games is included.

FORWARD TO PROJECT I-C-E ENVIRONMENTAL EDUCATION GUIDES

In 1969, the First Environmental Quality Education Act was proposed in the United States Congress. At the time of the introduction of that legislation, I stated:

"There is a dire need to improve the understanding by Americans of the ominous deterioration of the Nation's environment and the increasing threat of irreversible ecological catastrophe. We must all become stewards for the preservation of life on our resource-deficient planet."

In the three years since the Environmental Education Act was passed by the Congress, much has happened in the United States to reinforce the great need for effective environmental education for the Nation's young people. The intensive concern over adequate energy resources, the continuing degradation of our air and water, and the discussion over the economic costs of the war against pollution have all brought the question of the environmental quality of this nation to a concern not merely of aesthetics but of the survival of the human race.

The intense interest by the public in the quality of our lives

as affected by the environment clearly indicates that we cannot just use incentives and prescriptions to industry and other sources of pollution. That is necessary, but not sufficient." The race between education and catastrophe can be won by education if we marshal our resources in a systematic manner and squarely confront the long-term approach to saving our environment through the process of education.

As the incessant conqueror of nature, we must reexamine our place and role. Our world is no longer an endless frontier. We constantly are feeling the backlash from many of our ill-conceived efforts to achieve progress.

Rachel Carson's theme of "reverence for life" is becoming less mystical and of more substance as our eyes are opened to much of the havoc we have wrought under the guise of progress. A strong commitment to an all-embracing program of environmental education will help us to find that new working definition of progress that is a pre-requisite to the continued presence of life on this planet.

- Senator Gaylord Nelson

PREFACE

PRIMARY TEACHERS!

Here's what you've been looking for!!
Lessons & Activities in all capacities
to INTEGRATE

With ALL subjects.

NO extra planning.

NO extra lessons.

Use daily, whenever, wherever,
the opportunity arises.

Slant this year's teaching
toward ECOLOGY!

Help your class become

AWARE

of their WORLD.

We will need their HELP
in PRESERVING it!

DIRECTIONS FOR USING THIS GUIDE

This guide contains a series of episodes (mini-lesson plans), each containing a number of suggested in and out of class learning activities. The episodes are built around 12

major environmental concepts that form a framework for each grade or subject area, as well as for the entire K-12 program. Further, each episode offers subject area integration, multidisciplinary activities, where applicable, both cognitive and affective behavioral objectives and suggested reference and resource materials useful to the teacher and students.

1. This I-C-E guide is supplementary in design--it is not a complete course of study, nor is its arrangement sequential. You can teach environmentally within the context of your course of study or units by integrating the many ideas and activities suggested.
2. The suggested learning activities are departures from regular text or curriculum programs, while providing for skill development.

3. You decide when any concepts, objectives, activities and resources can conveniently be included in your unit.

4. All episodes can be adapted, modified, or expanded thereby providing great flexibility for any teaching situation.

5. While each grade level or subject area has its own topic or unit emphasis, inter-grade coordination or subject area articulation to avoid duplication and overlap is highly recommended for any school or district seeking effective implementation.

This total K-12 environmental education series is the product of 235 classroom teachers from Northeastern Wisconsin. They created, used, revised and edited these guides over a period of four years. To this first step in the 1,000 mile journey of human survival, we invite you to take the second step--by using this guide and by adding your own inspirations along the way.

PROJECT I-C-E TWELVE MAJOR ENVIRONMENTAL CONCEPTS

1. The sun is the basic source of energy on earth. Transformation of sun energy to other energy forms (often begun by plant photosynthesis) provides food, fuel and power for life systems and machines.
2. All living organisms interact among themselves and their environment, forming an intricate unit called an ecosystem.
3. Environmental factors are limiting on the numbers of organisms living within their influence. Thus, each ecosystem has a carrying capacity.
4. An adequate supply of clean water is essential to life.
5. An adequate supply of clean air is essential for life.
6. The distribution of natural resources and the interaction of physical environmental factors greatly affect the quality of life.
7. Factors such as facilitating transportation, economic conditions, population growth and increased leisure time influence changes in land use and population densities.
8. Cultural, economic, social, and political factors determine man's values and attitudes toward his environment.
9. Man has the ability to manage, manipulate and change his environment.
10. Short-term economic gains may produce long-term environmental losses.
11. Individual acts, duplicated or compounded, produce significant environmental alterations over time.
12. Each person must exercise stewardship of the earth for the benefit of mankind.

A "Concept Rationale" booklet and a slide/tape program "Man Needs His Environment" are available from the I-C-E RMC to more fully explain these concepts.

TABLE OF CONTENTS

Concept	Topic	Page No.
i	Food, Clothing, Shelter - Story Writing Plants Drawing Sculpture	7 9 13, 15 17

CONCEPT NO. 1 - Energy

SUBJECT Social Studies, Language Arts

ORIENTATION Sun Energy

TOPIC/UNIT Food, Clothing, Shelter - Story Writing

BEHAVIORAL OBJECTIVES	STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:	In-Class:	Outside or Community:
Explain the importance of the sun to our plant world in areas of food, shelter and clothing in story form with illustrations using selected pictures.	I. Social Studies A. Class develops a bulletin with picture examples of food from plants, clothing from plants, shelter from plants & energy from plants. (When possible, show the sources of plants.)	A. Have students bring magazines from home. B. Invite a farmer, lumberman, grocery man, or others related to the environment to speak with the children. (Correlate with career education.)
Explain what the earth would be like if there would be no sun.	II. Language Arts	
Affective:	A. The teacher could throw out the question - "What would happen if the sun suddenly disappeared?" Have the children give ideas. (Ex.- How might the earth be different if there were no sun?	
Defend the need for sun in our lives in a verbal discussion.	B. Following the above discussion, write a creative story, "I am living in a world without a sun."	
Skills Used:		
1. Organizing & interpreting facts, materials & experiences. 2. Skill of observing accurately. 3. Skill of participating in group work. 4. Discussing 5. Writing

CONCEPT NO. 1 - Energy

SUBJECT Science, Math, Music

ORIENTATION Energy Use

TOPIC/UNIT Plants

BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:		In-Class:	Outside or Community:
		I. Science	I. Science
List three things necessary for plants to make their own food.		A. Get two plants (same kind). Don't water the plants for three days. Cover the soil of one plant with waxed paper & water both plants for two weeks. Then compare them to see which plant looks as if it can make food.	A. Children will visit a vacant lot, park or school forest to observe plants growing there. They will report & discuss conditions under which plant growth differs because of the amount of lack of sunlight.
Conduct an experiment that will allow the determination of the number of days that a plant can live without sunlight.		B. Mineral experiment to show how water & minerals get up into a celery stem & leaves. Cut plant's stem away from roots. Put the cutting in a glass of colored water for a day. Observe into which part of a growing plant the water & minerals go first.	A. Invite florist to speak to class on effect of sunlight on plants in a greenhouse. 1. He will tell class how many plants can be served per square foot of sunlight.
Affective:	Willingly conduct an experiment that will support the plant's need for soil, water and sun for making their own food, when challenged.	C. Use identical plants Cover one with paper bag but continue watering and place it in dark room. After three weeks (Continued)	B. Visit a greenhouse to see how many plants can live in a given area of sunlight. C. In small groups at the greenhouse students will try to determine which plants need the most sunlight and how much more. (Continued)
Skills Used:			
1. Observation			
2. Recording			
3. Identifying things necessary for plant growth			
4. Investigating			
5. Experimentation			
6. Measuring-inches to meters

ORIENTATION Sun Energy

TOPIC/UNIT Drawing

BEHAVIORAL OBJECTIVES

Cognitive:

Illustrate the principle, "The whole is equal to the sum of its parts", using cutout sections of the sun.

In-Class:

STUDENT-CENTERED LEARNING ACTIVITIES

Outside or Community:

Affective:

Accept the principle, "The whole is equal to the sum of its parts", by not challenging the statement when presented.

Skills Used:

1. Proportional enlargement (through use of a grid).
2. Drawing
 - a. Crayons
 - b. Oil pastels (water colors can be substituted).
3. Fitting pieces together in a puzzle.

A. Mural

1. Find or make a stylized detailed picture of the sun. An opaque enlargement may be needed.
2. Divide into numbered sections so each student will have portion of the picture.
 - a. Cut & distribute.

1	2	3
4	5	6
7	8	9
10	11	12

3. Each student must enlarge his portion of the picture on a sheet of paper that is in direct proportion to his picture segment.
4. Each enlargement is then brought to a reserved numbered space on the wall and all the pieces are fit together as (Continued)

Limit colors to warm colors--red orange, pink and yellow.</p>

Environmental: CONCEPT NO. <u>1 - Energy</u> ORIENTATION <u>Sun Energy</u>		Integrated with: SUBJECT <u>Art</u> TOPIC/UNIT <u>Drawing</u>	
BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive: Illustrate the effect of light on a subject by tracing shadows.	In-Class:		Outside or Community:
	A. Sun Shadows 1. Go outside and collect sun shadows by tracing the shadows of bike wheels, trees, students, etc. on large sheets of newsprint. 2. After shadows have been traced, students can use the space divisions for a design which will utilize the object's form and spaces between the object's shadows. 3. Use Sketcho, crayons, markers, colored inks, chalk-limit colors to sun colors.		
Affective: Demonstrate awareness of the effect of lighting on a subject by moving an object to increase or decrease the intensity of light on the objects.			
Skills Used: 1. Working with large sheets of paper and charcoal. 2. Tracing. 3. Positive and negative space. 4. Balancing a composition. 5. Awareness.

CONCEPT NO. 1 - Energy

SUBJECT Art

ORIENTATION Sun Energy

TOPIC/UNIT Sculpture

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

Devise a plan to create an object which reproduces the following characteristics of the sun: energy, warmth, plant growth, weather, light, day and night.

In-Class:

Outside or Community:

Affective:

Indicate his value of the sun by volunteering his comments on the importance of the sun.

Skills Used:

1. Integrating available materials, e.g. boxes in construction.
2. Painting (finished product).
3. Discussion.

A. Discussion held about the characteristics of the sun (sample questions).

1. What words would you use to describe the sun?
 2. What does the sun do for others?
 3. What does the sun do for you?
 4. What feelings does the sun give you?
- B. Teacher will jot down on the chalkboard key points of the discussion.
- C. Sun Machine - Box Sculpture
1. Create a mini-machine to replace the sun out of a shoe box and available materials. Students will have the option to choose those characteristics of the sun which their machine will duplicate. Students and teacher will collect and share materials for the art project.

Integrated with:

CONCEPT NO. 2 - Ecosystem

SUBJECT Language Arts, Science, Physical Ed.

ORIENTATION Birds, Ecosystem

TOPIC/UNIT Animal Habitants - Food Chains
Animals - Habits & Movements

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

In-Class:

Outside or Community:

Identify pictures of five wild animals common to our area, and their primary food and native habitat.

Describe two main differences between the wild and domestic.

Affective:

Indicate awareness of existence of individual differences in animals' habits and habitats by making statements such as "The animal's habits are different than that animal's".

Skills Used:

1. Write report of a favorite animal.
2. Collect pictures of animals in their natural habitats.
3. Record number of animals & birds seen.
4. Locomotor skills in bending and squatting positions.

I. Language Arts-Motivation

A. Teacher introduces

the poem called
"The Tall Grass Zoo"

(from With Skies
and Wings, pp. 186-
195, Ginn & Co.,
teacher's edition
recommended) by
saying: "The crea-
tures in this poem
are not wild animals
or zoo animals, but
they're very quiet
creatures. Where can
we find them? In
your backyard! Let's
read, shall we.
Teacher reads the
poem and discusses
such ideas as:

1. How could you find out more about these creatures?
2. If you were one of these creatures, how would you want to be treated?
3. Describe one of the creatures in the first person "I am..."

(Continued)

A. Visit a museum or zoo to see first-hand animal life. Notice natural habitat.

B. Collect & study a few special animals, such as mice, gerbils, etc. Keep in room.

C. Take a nature walk to a creek to observe frogs and crabs in action. Bring a crab, frog or cricket to school. Observe it in action.

D. Choose one of the above animals and read as much as you can about it. Report on its movements. Encourage children to use magnifying glasses in their own "backyard zoo".

E. Bug's Eye View - Everyone stretches out, eyes on grass level, to see what the world is like to a bug. The blade of grass is like a tree! The pebble is mountain-size--to a bug. Big things like trees just don't show. People are just feet.

Community:

CONTINUED OR ADDED LEARNING ACTIVITIES

CLASSROOM (Continued)

- F. Record books made by class for one week. Report on live animals, animals on TV.
 - G. Discuss the term extinct. Ranger Rick magazines are excellent for articles about such animals.
 - H. Set up an aquarium and have children discover the food chain.
 - I. Make a bulletin board of these food chains and discuss with children.
 - Sun -- Grass -- Cows -- Milk -- Cheese -- Child
 - Sun -- Plants -- Butterflies -- Chicken -- Fox
 - Sun -- Plants -- Cows -- Children eating hamburgers
 - Sun -- Water plants -- Bugs -- Ducks
 - Sun -- Grass -- Rodents -- Eagle
- III. Physical Education (in gym or outside)
- A. Question the children about the ways animals move.
 - B. Direct them to try and move like:
 - 1. An inchworm:
 - bend over until your hands touch the floor in front of you
 - rest on your hands and feet
 - slowly bring your feet up as close as you can to your hands
 - inch your hands forward
 - 2. A crab:
 - squat down and reach back, putting both hands on the floor without sitting down
 - keeping your body stiff and in a straight line, walk forward, backward and sideways
 - 3. A cricket:
 - squat and spread your knees
 - put your arms between your knees
 - put your arms between your knees and grasp the outside of your ankles with your hands
 - walk forward and backward, chirping like a cricket

(Continued)

CONTINUED OR ADDED LEARNING ACTIVITIES

Publications:

CLASSROOM (Continued)

4. A frog:
- squat down with your hands placed on the floor slightly in front of your feet
 - jump forward a few feet lighting on your hands and feet at the same time
- C. Relay races using the above animal movements can be used.

ORIENTATION Resources & Communities

TOPIC/UNIT Living Things, Animal & Plant

Habitats

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

List factors which are common to both plants and animals in order to live in a particular place.

In-Class:

Outside or Community:

Determine whether a given situation will result in an increase or decrease in life in the area and support the decision.

Affective:

Freely respond with examples when asked "Who in your neighborhood or family depends on someone else for food, clothing or shelter?"

A. In-Class:

Motivation. Show pictures under the opaque projector of forest areas. Have children decide what makes up this community (plants and animals). Name some of the individual members of the community. The following ideas are to be discussed:

A. Outside or Community:

Visit a pond area to find plants and animals there and decide upon common factors among them.
Visit a museum to observe various habitats common to both plants and animals of specific areas.
Use ICE field activity guide "Who Was Here", available from ICE RMC.

1. What do the members of this community share?

- a. natural resources
- b. food
- c. shelters

2. Does this look like a good area to have a community?

What might determine the size of a forest community?

- a. food supply (population)
- b. change in living conditions

1) seasons--some migrate, natural disasters, as floods, tornadoes, etc.

Skills Used:

- 1. Research skill.
- 2. Communication and reference skills.
- 3. Skill of participating in group work.
- 4. Critical thinking.

SUBJECT

Science, Math

ORIENTATION

Water Supply and Consumption

TOPIC/UNIT

Water - Water Cycle

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

In-Class:

Outside or Community:

Define the water cycle.

I. Science

A. Visit water department and water treatment plant, also sewage plant. Check age requirements.

Identify a diagram or illustration of the water cycle and the major parts of the cycle.

A. Conduct an experiment showing what happens when you wash a greasy or dirty cloth with water, with soap and water and with detergent and water.

B. Have an engineer from a local industry, ex- paper, tell how his company uses and re-cycles the water into the stream or river.

List three ways which can be used to conserve water in the home.

B. Collect pictures of things and various ways we use water in the home.

C. Have representative of conservation department talk and demonstrate ways to save water.

Affective:

Freely agree with the statement "Water needs to be conserved for the future".

C. Make a bulletin board of the water cycle (clouds, land, lake, evaporation to clouds).

Proposes a way the individual student could conserve water for the future.

D. Compare samples of tap water, deep well water, pond, lake and fresh rain water for turbidity, living and non-living things.

Skills Used:

II. Math

1. List things that use water.
2. Develop a definition of water pollution.
3. Compare kinds of water and list things that contaminate it.
4. Counting and recording.
5. Discussion
6. Charting

A. The student will count and record the number of times he uses water in a three-day period by estimating it in

CONCEPT NO. 5 - Air

SUBJECT Social Studies, Art

ORIENTATION Air Quality

TOPIC/UNIT Air

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

Demonstrate through dramatization how the local government works to solve an air quality problem.

In-Class:

Outside or Community:

I. Social Studies

A. Take a survey of neighborhood to see what neighbors think should be done about air quality problem in their community. Note: The class will develop an interview form before the survey is taken.

A. Discuss in simple terms the basic type of government in the community, i.e. elected & non-elected officials; functions of government; how government gets it authority; how laws are made and problems in area are solved.

B. Invite a local government leader to talk to class about government problems and how local governments work together to solve problems.

1. Burning leaves

C. Visit City Hall and see where things happen.

2. Traffic problems and rapid transit ideas

D. Collect boxes and tubes of various sizes for pollution bugs. Students could spend some time outside studying bugs with magnifying glasses. They should become aware of the many parts of a bug, that they may transfer this knowledge to the project and make a better air pollution bug.

3. Local incinerators let children take the roles of various citizens' groups and public officials such as mayor, councilman, city manager and county commissioner. Guide them in discussing the problem.

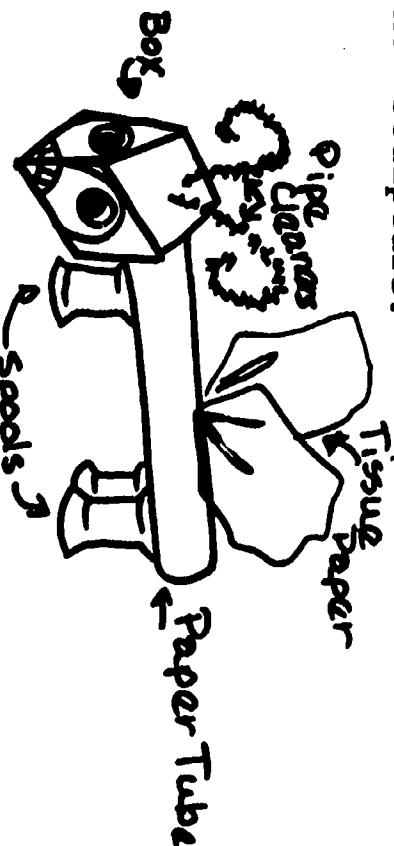

E. (Continued)

Affective:

The student shows awareness of polluted air by urging parents to change air quality in their communities through the channels of local government through letter writing.

Skills Used:

1. Communication
2. Dramatizing
3. Participating in group work
4. Interviewing & reporting
5. Construction
6. Cutting and pasting

TOPIC/UNIT

Texture Rubbings, Pen & Ink, Collage

BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
<p>Cognitive: Construct a picture utilizing the rubbing textures he has obtained.</p>	<p>Affective: Demonstrate awareness of textures in nature by wanting to work in direct contact with them.</p>	<p>In-Class:</p> <p>A. Motivating activity</p> <p>1. Give students several objects to feel and describe--include objects with a variety of textures.</p> <p>2. On the chalkboard write: Which is more smooth A window pane or a stuffed chair? A baby's face or its father's face? A gravel walk or a bare waxed floor? A handkerchief or a washcloth? The tread on a tire of a car or the car windows? A ripe tomato or a ripe strawberry? A newspaper or a sheet of sandpaper? New ice on a pond or ice frozen from slush in the street? A board just sawed or this board after sanding? (Continued)</p>	<p>Outside or Community:</p> <p>A. Take a walk to discover textures in the environment. Rubbings could be done at this time also.</p> <p>B. Field trip to a local fabric store, leather company, department store, etc. to contrast man-made textures with natural textures.</p> <p>C. Use ICE field activity guide "Colors, Shapes (Patterns)", and Textures in Nature". See complete field guide attached.</p>
		<p>Skills Used:</p> <p>1. Rubbing techniques. 2. Design principles. 3. Perspective. 4. Texture awareness 5. Pen and ink 6. Cut 7. Paste 8. Observation</p>

<p><u>Publications:</u> <u>That's A Rub Arts and Act,</u> <u>Janitz</u></p> <p><u>Audio-Visual:</u> <u>The Art of Seeing (Texture),</u> <u>Warren Scholoot Pro. Inc.</u> <u>Film:</u> <u>Discovering Texture, BAVI</u> <u>Klt:</u> <u>Environmental Awareness, ICE</u> <u>RMC, Kt 16</u></p> <p><u>Community:</u></p>	<p><u>CLASSROOM (Continued)</u></p> <ol style="list-style-type: none"> 3. A leather coat or a burlap bag? A turtle or an eel? Your eyebrows or your lips? Woolen mitts or cotton gloves? Students draw and label five objects of their own--which have a smooth texture. B. Texture Rubbings <ol style="list-style-type: none"> 1. Make a variety of crayon rubbings from nature (one might also include other interesting textures). 2. Using rubbings, cut out suggested shapes, e.g. tree texture, a tree cross hatch texture, body of a fish, rough stipple texture, a snake, etc.) 3. Glue these shapes to a background piece of paper to create a picture. Stress filling space. C. Develop a design consisting of six or seven related shapes. Stress balance and overlapping. D. Create textured patterns by using various combinations of pen strokes (cross hatching, stippling, variations and combinations). E. Huff and Puff Designs Shelf paper is good for this, because the paper shouldn't be too absorbent. Near the bottom of the paper, the child drops a blob of paint. Then he takes a drinking straw and without touching the paint, blows it around the paper in any design he likes. The first attempt is likely to look like a tree or plant, especially if a dark color was used. Smaller blobs of brighter color can be blown around it so as to look like flowers. As the child learns how to handle the colors and the straw, the designs will take bolder and more original forms. Balance and interesting color combinations will begin to show up.

Grades 1-3

COLORS, SHAPES (PATTERNS), AND TEXTURES IN NATURE
(art, language arts, science)

Purposes: To see how design, change, and variety in nature add beauty and enjoyment.

To develop observation skills.

To communicate these ideas visually/verbally

Directions: As you walk in the woods, take a good look around.

Take your time, walk slowly and stop as many times as you want. You'll see brand new colors, or colors you haven't seen for awhile. Most animals only see shades of black and white--like a black & white TV set.

Animals miss out on the fun of color, but you're lucky.

You can enjoy colors.

Your first task will help you see more colors.

1. Name or draw three objects you see during your walk that have new or different colors. Under each name or picture--write a few words to describe the color. This will help you when you mix the color back in class. Here's one example.

Name Leaf

Picture:

Description muddy yellow edges,

bright green centers

a. Name _____

Picture:

Description _____

b. Name _____ Picture: _____
Description _____

c. Name _____ Picture: _____
Description _____

2. Your second task is like making a paper fossil.

Directions:

- a. During your walk, pick out two hard objects you like.
 - b. Next, use blank paper and place a sheet over part of the object.
 - c. Use a crayon or pencil to get a picture of the object's surface or textures. This is called a rubbing.
 - d. Back in class, your teacher will hang the rubbings to dress up the room.
3. Look for patterns or shapes in nature and draw two of these shapes.
- a. _____ b. _____

4. If you have time, you may want to collect some interesting objects to make a collage back in class. Be careful not to damage or uproot anything.

CONCEPT NO. 7 - Land Use

SUBJECT Mathematics, Social Studies

ORIENTATION Population Distribution and Growth

TOPIC/UNIT Community Workers and Growth

BEHAVIORAL OBJECTIVES	STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:	In-Class:	Outside or Community:
<p>Define population density.</p> <p>Identify areas on U.S. map where greatest density exists.</p> <p>List three factors that regulate population growth.</p>	<p>I. Social Studies</p> <p>A. Read story "Farewell to Shade Glade" to group as a motivational offset; discuss population in your area and how it has increased. (using outside activities).</p> <p>B. Note on map where crowded congested cities are (blue). Now color equal area in red (showing how much land area will be needed when population in U.S. is doubled). Will be less area to produce food for people.</p> <p>C. Have city mayor or some city official give a talk on the city's history concerning such points as: population, land use, schools, parking lots, shopping centers, etc.</p> <p>(Continued)</p>	<p>A. Find out through local Chamber of Commerce how many people live in your community. How many doctors, lawyers, teachers, builders, mechanics and other kinds of workers serve the community. If there is a shortage in your community, what are some of the reasons for it? Also, question parents and grandparents as to how many there were 50 years ago, 10 years ago and today. Make a bar graph to show increase. Publication on Sampling Button Populations is excellent for this. See back. Find out from the local hospital or local newspaper how many babies are born in a week. At that rate, what would the population of your town be in one year? 10 years? 20 years? What other</p> <p>(Continued)</p>
<p>Affective:</p> <p>Selects the factors that would have the greatest effect on population growth and defends his choice.</p>		
<p>Skills Used:</p> <ol style="list-style-type: none"> 1. Math skills--add & subtract, involving borrowing. 2. Comparing 3. Analyzing 4. Map reading 5. Bar graph

CLASSROOM (Continued)

- II. Math
 - A. Population sheet. Teacher handout sheet to students. Students compute the population gain for each state. A few problems could be done on board as examples. (attached sheet)
 - B. Other questions the teacher could have the students answer are as follows:
 1. Which state had the most population in 1960? The least?
 2. Most in 1975? Least in 1975?
 3. Which state's population increased the most? The least?
 4. Did any state's population drop? Which one?
 5. How much population gain did we have in Wisconsin?
 6. List in order from largest to smallest the ten states that had the biggest population increases.
 7. Name some reasons why a state's population could have increased.
 - C. Children will work and play in a confined area of the classroom for one day to concretely experience overcrowding. Discussion of feelings and reactions will follow.

CONCEPT NO. 7 - Land Use

SUBJECT Social Studies, Language Arts, Music,

ORIENTATION Transportation Systems

TOPIC/UNIT Transportation (Roads) Math

BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES			
Cognitive:	In-Class:	Outside or Community:			
Demonstrate knowledge of the chronology of transportation modes by: a. Listing ways of road transportation today. b. Contrasting road transportation of long ago and today. c. Listing into chronological order four songs of transportation given by the teacher.	I. Social Studies A. Teacher will use pictures of different types of roads for comparison. B. The students will compare farms, towns, cities of today to the farms, towns & cities of long ago, e.g. cobblestone streets vs. cement streets, dirt roads vs. asphalt roads. C. Discussion will follow telling why people move about now and how they moved about years ago. The students will pick out an area and make a picture, showing what it looked like years ago and how it has been changed to help us move from place to place, e.g. dirt roads vs. freeways. These pictures can be made into class mural.	A. After school each child will sit someplace near his home and count the number of different vehicles that pass. B. The next day the class can make a chart and put the numbers they counted under the correct headings.			
	Affective: Demonstrate his awareness of the environmental problems caused by transportation by asking questions such as "What would be the effect on the environment if we didn't travel?"	C. Discussion will follow telling why people move about now and how they moved about years ago. The students will pick out an area and make a picture, showing what it looked like years ago and how it has been changed to help us move from place to place, e.g. dirt roads vs. freeways. These pictures can be made into class mural.	Cars Trucks Buses Etc.	Gravel Road	Highway
					City Road
Skills Used: 1. Interpreting 2. Illustrating 3. Comparing 4. Making a survey 5. Making a chart 6. Critical thinking 7. Singing skills 8. Research study 9. Reporting skills		C. Use ICE field guide "Don't Use Traffic Jam on Peanut Butter Sandwiches" for math skills. Available at ICE office.			
		D. Bring pictures of transportation modes. E. Put pictures in chronological order. F. Railroad Museum trip (fare required) to see different changes in the railroads over the years.

Environmental:		Integrated with:	
CONCEPT NO.	7 - Land Use	SUBJECT	Language Arts
ORIENTATION	Population	TOPIC/UNIT	Hobby - Leisure Time
BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive: Define in his own words what leisure time is. List five ways in which they use their leisure time.		In-Class: A. Discuss leisure time. Ask the children how their parents use a 24-hour day. Ex.-Father sleeps eight hours, works eight hours, travels one hour to and from work, eats 1½ hours, five hours of leisure time (used constructively and derives personal satisfaction). Given a 24-hour day, children will estimate and record how their parents use a normal day. B. List the different kinds of hobbies among children and adults. Discuss how the importance of an adult having a hobby is in filling approximately 40 hours of free or leisure time each week. Have a hobby show for children and adults. (If they wish.) 1. What do you do in your free time? (Continued)	
Affective: Volunteer to demonstrate their hobbies to the class, as examples of leisure time.		Outside or Community: A. Bring in recreation leader or park director to discuss the use of our parks and recreation sites. B. Bring in senior citizens or go to them if necessary to discuss their hobbies and use of leisure time. C. Invite parents to the classroom to demonstrate or discuss their hobbies.	
Skills Used: 1. Gathering information. 2. Interviewing. 3. Charting.			

72/73

SUGGESTED RESOURCES	CONTINUED OR ADDED LEARNING ACTIVITIES
<p><u>Publications:</u></p> <p>President's Council on Recreation and Natural Beauty, <u>From Sea to Shining Sea; A Report on the American Environment - Our Natural Heritage</u>, Washington, D.C., 1968, ICE RMC, 100 Pr</p> <p>Childcraft, encyclopedia, "Make and Do Section on Hobbies",</p> <p><u>Audio-Visual:</u></p> <p>Film:</p> <p><u>Nature Is For People</u>, BAVI</p> <p><u>Community:</u></p> <p>Recreation leaders</p>	<p><u>CLASSROOM (Continued)</u></p> <ol style="list-style-type: none"> 2. What do your parents do in their free time? 3. What are some possible hobbies people can choose to do? 4. Do hobbies have to involve a lot of money? 5. Why are hobbies needed? C. Hobby club could be started. D. Discuss (in terms of population growth) the need for recreation as our population increases. <ol style="list-style-type: none"> 1. What was the population of our community 50 years ago? What is it now? 2. Has this growth affected our parks any? How many parks did we have long ago (50 years)? How many now? 3. If our community continued to grow, what changes will be necessary? 4. Ask your parents and grandparents what they did for fun? Is this the same as you do now? 5. Will you have more or less leisure time in the future? Why? What will you do? How will you use our natural resources so as not to waste?

Environmental:		Integrated with:	
CONCEPT NO.	7 - Land Use	SUBJECT	Art
ORIENTATION	Land Use	TOPIC/UNIT	Sculpture - City Planning
BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive: Construct alternative solutions, individually and in groups, to given cause and effect problems of a city such as: a. Population change b. Highway change of route		In-Class: A. The class can create a miniature model neighborhood on a table top or in a sandbox using a variety of media; clay animals, toy cars, boats, box houses, pipe cleaner fences. B. A "what if" possibility is given and the students are required to make the necessary changes in their model neighborhood. Example: 1. What if a proposed highway is planned to go right through the neighborhood? 2. What if there was a sudden influx of people into the area?	Outside or Community: A. Field trip to see what things can be included in a model neighborhood. Perhaps continued trips to aid "what if" solution. B. Have the city planner or an architect come to talk to the students on the problem of land use.
Affective: Demonstrate his alertness to effects of various changes in the neighborhood by bringing examples to class. Voluntarily informs class members of the possible effects changes in the community may have.			
Skills Used: 1. Construction of various elements within city. 2. Architectural awareness. 3. Observation. 4. Problem solving.

Community:

Environmental:		Integrated with:	
CONCEPT NO.	8 - Values and Attitudes	SUBJECT	Science
ORIENTATION	Noise Pollution	TOPIC/UNIT	Sound
BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive: List five sounds that are disturbing and five sounds that are pleasing. Write a short paragraph telling how we can reduce the effect of sounds which are disturbing.	In-Class:	Outside or Community:	
	A. Experiments in how sound travels: 1. Tuning fork 2. Rubber bands on a box drum 3. Drum 4. Pebble thrown in water 5. Homemade phone 6. String and a glass 7. Doorbell B. Discuss how men and animals use sound. List similarities. 1. Sound received by vibrations through a membrane. 2. Sound is protective warning. 3. We often have too much sound. C. Discuss sounds. 1. What sounds do you hear every day? 2. Which sounds do you like? 3. Which sounds don't you like? 4. Which sounds are bad for us? Why? 5. How can we help to stop noise pollution?	A. With a tape recorder, children can record and analyze the sounds in the community. List the sounds according to categories: natural, animal-made or man-made, loud or soft, necessary or unnecessary, and so on. How do the sounds affect animals and humans? Can anything be done to reduce sounds that are disturbing? Have the children each list sounds they consider to be noises. Do their lists match? What is the advantage of using the tape recorder? Do we hear all the different sounds around us? B. If possible, tape the sound of an auto, twin-engine plane and jet plane. Then talk about the physical effects of each on the environment, effects on man, animals, plants.	
	Affective: Listen for unnecessary noise on his own and tell what he has done at home or at school to reduce this.		
Skills Used: 1. Observation 2. Research 3. Experiment 4. Compare 5. Listening			

SUGGESTED RESOURCES	CONTINUED OR ADDED LEARNING ACTIVITIES
<p><u>Publications:</u></p> <p><u>The Listening Walk</u>, Paul Showers, Crowell, clicking dog nails and squeaky baby wheels are just some of the sounds neatly described to promote student listening and an actual "quiet" listening walk around, nearby or inside the school. Environmental:		Integrated with:	
CONCEPT NO.	8 - Values and Attitudes	SUBJECT	Art, Reading
ORIENTATION	Land Use	TOPIC/UNIT	Environmental Sculpture
BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive: Select examples of what factors contribute to an attractive or an unattractive environment and incorporate them into an art display or project.		In-Class: I. Art A. Go outside and collect materials you find in your environment such as wood scraps, cans, objects from a junk yard, rocks, leaves, etc. Create a sculpture from them. (Refer to Warren Scholast, Under-standing Sculpture I and II or, if not available, resources on back). Have each piece of sculpture show one of the following. (Student choice). Each child will write out a title for his piece of art work. 1. How ugly your environment is. 2. How beautiful your environment is. 3. How it makes you feel. 4. The joy or sadness of it. (Continued)	Outside or Community: A. The student materials may be obtained at the following: (these are suggestions only). 1. Beach 2. Woods 3. Junk yard 4. Junk from home 5. Saw mill or lumber yard 6. Anywhere the student may find them
Affective: Willingly share with the class a description of the most beautiful thing he has seen in the last week. Express sadness or joy when viewing either a destructive or constructive thing of beauty.			
Skills Used: 1. Basic sculpture techniques. 2. Observation. 3. Environmental awareness.			

SUGGESTED RESOURCES

CONTINUED OR ADDED LEARNING ACTIVITIES

Publications:

"Creative Uses of Scrap Materials", R. G. Lewie, School Arts, 69:11 F '70
 "Children's Sculpture", J. W. Burgner, School Arts, 71:42-40 '71

Audio-Visual:

Film:
Introduction to Sculpture Methods, BAVI

CLASSROOM (Continued)

II. Reading

5. How time changes your environment.

- A. Read Alvin Tresselt's book, The Dead Tree, (Parent's Magazine Press), which tells simply and beautifully how a tree recycles itself in nature. Compare and discuss the need for recycling in man's community. (See discussion questions that follow for suggestions).
- B. Questions for discussion:

1. What is this a story about?
2. How did you feel about what was happening to the oak tree?
3. What helped weaken and destroy the great oak tree?

carpenter ants	storms
termites	woodpeckers
fungus	snails
centipedes	slugs
skunks	

4. How did the great oak tree return to the earth?
 5. What happens to things when they decay?
 6. What would happen if the oak tree wouldn't have decayed? (If it weren't for decay, bacteria, etc., dead animals and plants would cover the earth.)
- C. Have children make a list of the animals who made their home in the oak at one time or another.

squirrels	deer mice
carpenter ants	rabbit
termites	chipmunks
woodpeckers &	centipedes
other birds	slugs
snails	beetles
grubs

CONCEPT NO. 8 - Values and Attitudes

SUBJECT Social Studies, Music, Language Arts

ORIENTATION Cultural Community

TOPIC/UNIT Africa

BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:	In-Class:	Outside or Community:	
Classify pictures into two groups, (1) That group of needs and (2) That group of luxuries for a family in our country. Compare the life of a person in our country with that of one in Africa including at least 5 ways in which they are similar and 5 ways in which they are different.	I. Language Arts		
	A. Children bring to class a picture of their family, catalogs and magazines.	A. Invite exchange student, teacher or traveler to speak to class about Africa's hot equatorial communities, ex.-	
	B. The children will cut out pictures showing what the family needs and what the family wants.	1. The country	
		2. Customs	
		3. Major occupations	
Affective: Find reasons and examples that support the idea that resources should be used more wisely.	C. A discussion will follow on what happens to our natural resources & pollution of our country when everyone has what he wants and what he needs.	B. Square dance demonstration or any dance common to the cultural influence of areas.	
	D. Have a list of resources and tell children what resource was used for articles from (B). Library references may have to be used.	C. Visit Milwaukee Museum or other reliable source to observe African artifacts.	
	E. Write to letter for pen pal correspondence with Ghanaian children at: Mission (Continued)	D. Peace Corps workers from Africa may send information to students and discuss life of Africans.	
Skills Used:			
1. Use map symbols.			
2. Locate land masses and bodies of water on globe.			
3. Classifying, comparing.			
4. Critical thinking.			
5. Use of library references.			
6. Experimenting.			
7. Collecting, discussing.

SUBJECT Mathematics (Fractions)

ORIENTATION Litter

TOPIC/UNIT Earth Week (Litter)

BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive: Define litter. Compare the amount of litter in different classrooms by estimating the volume in each classroom. Describe the difference between litter and littering.		In-Class: A. The students will tabulate by rooms the volume of litter in wastebaskets. Then they will indicate the amount of litter for each grade. B. Work out these problems: 1. Most Americans throw away about 5 pounds of trash a day. How many pounds is this in 5 days? In seven days? 2. How many pounds of trash does a family of 6 throw away a day? 3. Most Americans use about 4 cans a week. How many cans is this in 4 weeks? In 8 weeks? 4. How many cans does a family of 6 use in a week? 5. Most Americans use about 3 bottles a week. How many bottles is this in 4 weeks? In 8 weeks?	Outside or Community: A. The students will take a litter count in their own yard and report to the teacher on their findings. B. Visit the school incinerator. C. Have a school custodian describe work and problems caused by litter. Collect litter from your playground. Present facts about their findings to the rest of the school in an assembly so they become aware of the litter problem. E. Have the city's Director of Public Works give a talk on the problems caused by litter in the city. F. Also, the teacher might have the school's principal stop in and give a quick "anti-litter" plug.
Affective: The student will tell what he has done in the last week to reduce litter at school or at home and why he will continue to do this.			
Skills Used: 1. Counting. 2. Tabulation with fractions. 3. Compiling data. 4. Observation & comparison. 5. Charting. 6. Speech - reporting.

One 1965 car pollutes the air as much as five 1970 cars. How many 1965 cars pollute the air as much as 45 1970 cars?</p> <p>7. In 1970 a family of 6 persons threw away about 40 bottles and cans a week. Keep track of the number of bottles and cans your family throws away in one week.</p> <p>C. Have each child take home a survey sheet that inquires how many cans are used during a given three-day period. Parents and class members will work together recording daily use of cans and preparing them to be returned to school. Prior to this, the class is divided into two groups which are determined by the number of members in each family. To insure equal consumption, both groups will have approximately the same total number of family members. One group will return cans flattened and the other group will return cans in their regular form. See attached worksheet. After the worksheet is completed, students will:</p> <ol style="list-style-type: none"> 1. Discuss need for turning in cans for recycling. 2. Compare space of flattened cans to unflattened ones.

WORKSHEET

Attention, family members: Please record (tally below, the number of cans you've used for the three-day period, starting tomorrow.)

Day One

Day Two

Day Three

Please help us in our investigation. Carefully clean all cans and return them to school with your child daily. Your child is in the following group to:

() return cans flattened

() return cans in their regular shape

Names of the members in your family: _____

Environmental: CONCEPT NO. 9 - Management ORIENTATION Urban Environment		Integrated with: SUBJECT Art, Reading TOPIC/UNIT Construction	
BEHAVIORAL OBJECTIVES Cognitive: Describe the characteristics of the structure of the city.		STUDENT-CENTERED LEARNING ACTIVITIES	
Affective: The student becomes conscious of the complexity of the problems facing cities by making statements such as, "It's not that easy" when a student comes up with a simple solution to a city problem.		In-Class: I. Art A. Make a city (group project). 1. Cut out pictures of people, buildings, trees, cars, anything that's found in your city. 2. Paste a piece of cardboard on the back. Leave tab on bottom. 3. Draw blocks and streets, manhole covers on a big piece of cardboard or the bottom of a large box. 4. Assemble your pictures and place them in the city in their appropriate places. Push tab thru slit so buildings, etc. stand up, larger buildings toward back--create depth.	
Skills Used: 1. Construction 2. Cutting 3. Pasting 4. Layout		Outside or Community: A. Collect magazines, newspapers. B. Have the students take note of the streets and area around them on their way to and from school.

After the model is constructed, teacher presents various questions which might prompt a reconstruction of the model. Sample questions:</p> <p>a. What would happen if we doubled the population of the city? How do we provide for public services because of this increase? Students will offer suggestions as to how the city will meet doubled demands on:</p> <ol style="list-style-type: none"> 1) Water supply, 2) Traffic and public transport, 3) Housing, 4) Recreation, 5) Food supply, 6) Hospital, police and fire protection, and 7) Waste disposal. <p>B. Read <u>Wilson's World</u> by Edith and Clement Hurd (Harper and Row). A boy at his easel creates with paint--his own city. The excellent illustrations and story help students to think about the world they would like to create and live on.</p> <ol style="list-style-type: none"> 1. Compare <u>Wilson's World</u> at the beginning of the story with his world at the end of the story. 2. Name some things that drastically changed <u>Wilson's World</u>. 3. What advice would you have given Wilson as he was creating his world? <p>C. Teacher can tape-record <u>Wilson's World</u> and make both the tape and book available to students during their free time.</p>
<p><u>Community:</u></p>	

Environmental:		Integrated with:	
CONCEPT NO.	9 - Management	SUBJECT	Physical Education, Art, Music
ORIENTATION	Man vs. Environment	TOPIC/UNIT	More Earth Week - Litter Low Organization Games
BEHAVIORAL OBJECTIVES		STUDENT-CENTERED LEARNING ACTIVITIES	
Cognitive:		In-Class:	Outside or Community:
Define change in environment.		I. Physical Education	A. Possible correlation
Describe how the process of change occurs.		A. Pick the <u>Pumpkin Patch Game</u> . (See next page for directions.)	with classroom teacher's social studies unit.
Describe the possible change in environment that will occur as a result of a given factor or incident.		B. <u>Mulberry Bush</u> record.	Ex.-students' relationship to room, home, neighborhood and city environment.
Affective:		C. To the words of <u>Mulberry Bush</u> , the classroom teacher may put into the song words to fit the classroom environment instead of home environment.	
Will make and use a litter bag.		D. Discussion: Student-centered, teacher-directed.	
Aware of how they can change their home environment by reporting on recent changes at home. (Examples: Redecorating their own room, helping dad plant a garden or tree planting, etc.		1. Did you change the the pumpkin patch? Yes.	
Skills Used:		2. How did you change the things you did in the record?	
1. Running.		Clothes washed, ironed, baked bread, mended clothes, swept floors, etc.	
2. Throwing.		(Continued)	
3. Rhythmic skill.			

SUGGESTED RESOURCES	CONTINUED OR ADDED LEARNING ACTIVITIES
<p><u>Publications:</u></p> <p><u>Litter Prevention</u>, Keep America Beautiful, Inc., guide of suggested litter prevention activities for use in elementary schools, ICE RMC, VF The Mountain, Parvel</p>	<p><u>CLASSROOM</u> (Continued)</p> <p>3. How does your mother and father change the land around your home?</p> <p>4. What ways does man change our city?</p> <p>II. Art</p> <p>A. Children shall construct litter bags.</p> <p><u>PICK THE PUMPKIN PATCH</u></p> <p><u>Equipment:</u> Four 7" Playballs or rhythm balls.</p> <p>Designate the playing space. Four children are selected to be the Pumpkin Pickers. They put on a red pinnie, take a ball and go stand in the center of the playing area. The other children are pumpkins and scatter about the space. On the signal "Pick the Pumpkin Patch", the pickers chase after the pumpkins, throwing their balls at them in an attempt to eliminate them from the game by hitting them below the head. The pumpkins may dodge anywhere within the designated boundaries. If they are hit, they go sit down in the pantry (where they will be made into pie). They are eliminated from the game. After a designated time, 3-4 minutes, the Pickers count the number of pumpkins they have picked (hit). They choose a pumpkin still in the patch to take their place. Those pumpkins who were eliminated may now re-enter the game. See which group of pickers can pick the most pumpkins.</p> <div><div>PUMPKIN PATCH</div><div>PANTRY</div></div>
<p><u>Audio-Visual:</u></p>	
<p><u>Community:</u></p>	

SUGGESTIONS:

1. Make the pumpkin patch very large, so the children get a good run. This is a good game for a cooler day out-of-doors as most of the children are active for the greater share of the playing period.
2. When choosing children to be the first pickers, try to select those who are not chosen often by the other children. You might want the girls to choose girls to take their place and boys to choose boys. In this way, the throwers will be divided between boys and girls.

10 - Economic Planning

SUBJECT

Area Science

ORIENTATION

Soil Management

TOPIC/UNIT

Conservation - Erosion

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

Make a collage of wildlife pictures depending on soil.

In-Class:

Outside or Community:

Give an example of soil erosion that he has seen recently and offer a solution to the problem.

A. Drip water over two soil samples, one planted, but not the second. Observe erosion. Repeat this several times.

A. Collect soil samples and label as to coarse, fine; sand, clay, loam, peat, by color, smell. Keep samples for future use.

B. Make soil with crushed rock, dead insects, leaves, peelings. Plant seeds.

B. Collect soil samples from different depths: 5", 12", 20" and observe any differences.

Affective:
List ways in which soil erodes.

C. List all things in the kitchen that come directly or indirectly from soil

C. Collect two bottles of stream water, one before a storm and one after. Allow to settle and compare.

Write his views on value of soil conservation on paper.

D. Take two soil samples, one topsoil and one subsoil. Grow a plant in each and compare their growth.

D. Observe the soil around a newly-dug basement or construction. Look for signs of erosion, especially by sewer or curb. Look for soil in other places: sidewalk cracks, under fences, on blacktop. How did it get there?

E. For bulletin board or collage, cut out magazine pictures of wildlife that depend on soil conservation. This would include a lot. It could turn into a paper collage, individual posters or class may decide to classify into groups.

Skills Used:

1. Experimenting
2. Classifying
3. Observing
4. Making inferences
5. Listing
6. Discussion

E. Take pictures along a highway where newly constructed or where the road cuts through a hill. Discuss erosion possibilities and methods of control.

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

In-Class:

Outside or Community:

Differentiate between the terms, short-term gains and long-term gains.

I. Physical Education

I. Art

A. Motivation

A. Project illustrating some idea concerning an environmental loss resulting from short-term gains.

1. Offer a child a bag of candy.

2. Class discussion of short-term vs. long-term gains.

a. What if a child eats the whole bag in one sitting?

b. What alternatives are there besides eating the whole bag at once?

Affective:
Show an awareness of consequences resulting from poor posture habits through a discussion.

B. Posture pictures should be posted. Give demonstrations of short-term gains resulting in poor posture. Ex.-lifting, bending vs. stooping, carrying groceries, one large sack vs. two small sacks, sitting at desk, slouched vs. good posture.

Project illustrating some idea concerning an environmental loss resulting from short-term gains. Ideas include campfire safety vs. carelessness, economic gains vs. pollution of air and water, crop rotation vs. soil loss, forest management vs. clear cutting.

Skills Used:

1. Posture correctness.
2. Stooping and bending.
3. Body balance.

C.

Tie in environmental loss resulting from short-term gains.

SUBJECT Science

ORIENTATION Fire Prevention

TOPIC/UNIT Resource Conservation

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

Describe examples of what other people have done to illustrate short term vs. long term actions for resource conservation.

In-Class:

Outside or Community:

Affective:

Willingly discuss various acts of people that may affect the environment. (i.e. disposing of wastes, setting of fires, traffic jams)

A. List ways people set fires: cigarettes, matches, campfires, arson, trash piles, burning leaves, etc.

1. Make up an ABC forest fire prevention game. For example:
A is Always be careful with fire.
B is Burn trash only on calm days.
C is Campfires should always be put dead out.

A. Take a survey of all the fathers, mothers or relatives who hunt, ex.-ducks or deer.

Discuss the "sport" of such an act. Then read The Happy Hunter by Duvoisin and try to instill the idea of watching and not shooting animals. Play

With Me by Ets also helps the child understand that some wild creatures come near when we are quiet. Collect pictures of lakes. Write captions as to how area is used, ex.-amusement parks, cottage sites, areas preserved as a park.

B. Discuss times when children have gone places with their parents and have gotten caught in a traffic jam.

B. Invite a forest ranger in to discuss the use of fire and its misuse in our forests.

If a bus holds 40 people, how many cars could have been replaced by one bus?

C.

The children will draw pictures of four things people do which change their environment. Ex.-littering, starting a fire, driving cars, unnecessarily destroying wildlife without cause.

CONCEPT NO. 11 - Individual Acts

SUBJECT Language Arts

ORIENTATION Soil Management

TOPIC/UNIT Language (Earth) - Land Use

BEHAVIORAL OBJECTIVES	STUDENT-CENTERED LEARNING ACTIVITIES	
<p>Cognitive: Describe the types of changes that can come about by the addition of each of the following: a. water c. plants b. fertilizer d. heat</p> <p>Describe the characteristics of soil that can be determined by each of the following: a. touch c. smell b. taste d. sight</p> <p>Affective: Children will appreciate the use of their 5 senses in describing other environmental changes they might meet.</p> <p>Using puppets, students in teams create spontaneously 5-minute skits dramatizing how the senses can help us to manage the land.</p>	<p>In-Class:</p> <p>A. After outside activity "B", make a sense chart headed by the question: By using your senses, what can you learn about the soil? Me <u>The Soil</u> touch texture taste sandy smell moist sight color</p> <p>B. After completing the outside activity "B" or "C", class will discuss the question: How do we change the earth? 1. Add water to it. 2. Add fertilizer. 3. Plant something. 4. Let it dry out in the sun. 5. Heat it in an oven. Plant the same kind of seed (corn) in all foam cups and give each the same amount of water. Keep some of the plants away from direct sunlight, some in the window.</p>	<p>Outside or Community:</p> <p>A. Examine the various levels of the earth; color, texture, density, smell.</p> <p>B. Using senses - 1. Describe the smell of the earth. 2. What words would you use to tell how the earth feels? 3. Do some parts feel differently? 4. Look for signs of life. 5. How many colors do you see? 6. Listen as you rub the earth between your hands. Can you describe the sound?</p> <p>C. Use ICE field activity guide, "It's Your World", a sensory experience available from Project ICE.</p>
<p>Skills Used:</p> <ol style="list-style-type: none"> 1. Making comparisons. 2. Observation using senses. 3. Listing. 4. Making inferences. 5. Describing. 6. Charting evidence.

CLASSROOM (Continued)

- D. Students keep running chart of plantings in direct light and window light and then write a comparison/contrast report on their findings.
- E. Students evaluate their findings and list conclusions on chalkboard.
- F. How Could You Know?

If you could not use your eyes, how else could you tell just what each of these things named below was or just what was happening? Some you could hear, some you could smell, some you could taste, and others you would have to touch. Before each of the following, write how you would know. Write HEAR or SMELL or TASTE or TOUCH.

1. The glass of milk was warm.
2. The cheese was sharp.
3. The cake had orange icing.
4. The brown trunk was very light.
5. The closed tin can was empty.
6. It was sugar and not salt in the jar.
7. The string beans were cut but uncooked.
8. The baby had sticky hands.
9. The washing machine was full of water.
10. Hay had been stored in the top of the barn.
11. The cream had begun to turn sour.
12. It was fish and not chicken cooking in the covered pan.
13. The butter was too hard to use on soft bread.
14. The meat was well done inside, too.
15. The red apple was not really ripe.
16. The popcorn was too sweet.
17. The steam kept lifting the cover of the pan.
18. The small bowl was very heavy.

CLASSROOM (Continued)

19. Gas and not water was running from the underside of the car.
20. The mountain lake was ice cold.
21. The bark of the oak tree was not smooth.
22. The sidewalk on the sunny side of the street burned our feet.
23. There was sea water in the pool on the ship.
24. The teeth of the old saw were still sharp.
25. My brother ground his teeth in his sleep.

Audio-Visual:

G.

Tastings
Get the youngsters to pantomime their physical reactions to tasting something that is:

1. Too hot.
2. Too cold.
3. Something familiar.
4. Too bitter.
5. Something distasteful.
6. Very peppery.
7. Very good.
8. Oily.
9. Very sweet.
10. Very sour.

I'm with you and you're with me
And so we are all together
As we march along.

We are marching for Ecology, Ecology, Ecology,
We are marching for Ecology, Ecology, Hurray!

P O L L U T I O N

Pollution is a dirty word

But it's not hard to spell,

Just practice with the syllables

Until you know it well

Pol - lu - and then t i o n.

Pollution, pollution -

Let's spell it once again.

P - O - L - L - U - T - I - O - N

- - - - -

E-C-O-L-O-G-Y

E - C - O - L - O - G - Y

You can spell it if you try.

You can understand it, too,

And then you'll make it work for you.

It isn't luck, it isn't fate -

It's just that all things must relate.

Weather, wildlife, water, woods -

When they balance, life is good.

- - - - -

I see paper, I see trash,

I see someone's foolishness.

- - - - -

Fire, fire, fire alarm

A spark fell into a farmer's yard,

How many animals did it harm?

Holy smoke! The campfire got away tonight. How many trees did it burn down?</p> <p>-- -- --</p> <p>Papers, bottles, tires and cans Tell me pollution is caused by man Fight, fight, fight, fight pollution.</p> <p>C. Individual rope skills.</p> <ol style="list-style-type: none"> 1. Turn rope forward. <ol style="list-style-type: none"> a. Jump on toes of both feet. b. Jump on right foot. c. Jump on left foot. d. Jump first on right foot, then on left. e. Progress forward in a run. f. Progress forward in a skip. g. On the odd count, ordinary jump; on the even count cross hands in front of body making a loop through which the child jumps. h. Hold one leg high, knee straight, toes pointed, jump on other foot. i. Same as "h" but throw raised leg forward on one jump and backward on the next. j. Jump with feet spread sideward. k. Jump with feet spread sideward and backward. l. Rocker, leap forward on one foot, leap backward onto other foot. m. Double jump forward - two jumps to each turn of the rope. n. Jump and land with the feet crossed, alternating the position of feet on each jump. o. Click heels together while in air. p. Turn rope twice while in air. q. Move sideward right or left on each jump. <p>(Continued)</p>

SUGGESTED RESOURCES

CONTINUED OR ADDED LEARNING ACTIVITIES

Publications:CLASSROOM (Continued)

2. Turn rope backward doing the above.
 3. Click handles of rope together or clap hands each time rope is jumped.
 4. Cradling--swing the rope forward under the feet.
 5. Grasp both ends of rope in one hand, assume deep knee-bend position, and swing rope in a circular path near ground or floor and jump the rope.
 - a. Jump with both feet.
 - b. Jump with right or left foot.
 - c. Jump alternating hands, or direction.
 6. To change direction of rope or to permit jumper to make a different type of jump, use the slip--student swings rope to one side maintaining same jumping rhythm.
- D. Individual rope--partners jumping.
1. No. 1 turns rope forward, No. 2 runs in, faces his partner, and both jump.
 2. Same as "1" but done backwards.
 3. No. 1 turns rope forward. No. 2 runs in, turns his back to partner.
 4. No. 1 turns rope forward. No. 2 runs in behind partner.
 5. Partners stand side by side, inside hands joined, outside hands turning the rope.
 6. No. 1 turns rope forward, No. 2 runs in, faces No. 1 and executes quarter, half and full turns on each jump.

Environmental:

Integrated with:

CONCEPT NO. 11 - Individual Acts

SUBJECT Mathematics

ORIENTATION Quality of Life

TOPIC/UNIT Ordered Pairs

BEHAVIORAL OBJECTIVES

STUDENT-CENTERED LEARNING ACTIVITIES

Cognitive:

Given a shoe box, rig-a-jig triangles and blocks the child will construct a city block & discuss the significant changes taking place in this situation. Child will also discuss a possible increase of cars passing and of related problems.

The learner will propose ways of decreasing the amount of land we use.

Affective:

The learner will defend the proposed ways of decreasing the amount of land we use.

In-Class:

Outside or Community:

A. Simulating an environmental change.

1. Give each student a shoe box or similar box--stand up triangles from a rig-a-jig to act as trees.

2. Put a block into the box. This is a building. How many trees go?

3. Now introduce three or four blocks; how many trees go?

4. Child may graph results and findings.

B.

Car Census

1. Count the cars that pass by the building in ten minutes. If the number doubled, what would happen?

2. If it tripled?

3. Graph results.

4. Discuss what happens when an act is duplicated. Is there a way this could be stopped or changed so that natural areas could be preserved?

Skills Used:

1. Graphing
2. Math skills - subtraction
3. Interpretation
4. Constructing
5. Discussing

APPENDIX

Mr. Mars

Can be used with concepts 6, 7, 9 and 11.

One player is Mr. Mars. All other players stand in a straight line on one goal. In unison, players call, "Mr. Mars, Mr. Mars, will you chase us to the stars?" Mr. Mars replies, "Yes, if you're wearing _____". (He calls a color such as red, green, etc.) All players wearing that color run to opposite goal and Mr. Mars tries to tag them. Any player he catches is out of the game. He has three chances, then calls everyone over.

Telephone Tag

Can be used with concepts 7 and 11.

Form a circle. Count off by five. Each player lives in his own house. Teacher calls a number and all players with that number run counter-clockwise around the circle once and back to their own houses. Last one to get home was too late to answer the phone. He sits down in his house. Continue game until one player of each number is left.

Bird Catcher

Can be used with concepts 2 and 3.

Divide the class into four or five kinds of birds. One player is the hawk. The hawk stands in the center between two goals. He tries to guess the kind of birds each group is. When he calls the bird of a group, they must try to run to opposite goal without being tagged. To give hawk hints, the birds may imitate the sound they make.

Crows and Cranes

Can be used with concepts 2 and 3.

Equal number of players in two straight lines, three feet apart. One team is crows, the other cranes. When teacher calls crows, they run to their goal line, and the cranes try to tag them. If he calls "cranes", cranes run to their goal. Any player caught goes to opposite team.
